Product Description and Intended Use
TIMKEN Construction and Off-Highway Grease is an NLGI No. 2 high performance lubricating grease used when resistance to water washout, heavy loading, and broad operating temperatures are mandatory. The formulation of this product provides unsurpassed protection against bearing wear due to shock loading and outstanding corrosion and water resistance including salt spray. TIMKEN Construction and Off-Highway Grease also have exceptional mechanical stability even in the presence of water. It will provide extended protection in problem areas involving wet and dirty environments such as mining, construction, and off-road applications. It contains no heavy metals or other environmentally undesirable additives.

Product Application
TIMKEN Construction and Off-Highway Grease has an operating range of 0° F to + 375° F (-18° C to + 190° C) once in the application (depending on frequency of application, lubrication system design and method of application). Follow equipment manufacturer’s recommendations concerning lubrication frequencies.

Compatibility of Grease
TIMKEN Construction and Off-Highway Grease is generally compatible with calcium, calcium 12-OH stearate, calcium complex, calcium sulfonate, lithium, lithium complex and polyurea thickened greases. TIMKEN recommends that all grease be removed from the application prior to changing greases. Then the lubrication interval is reduced by half for the first lubrication cycle before resuming the normal lubrication interval.

Handling and Storage
Store in a dry area away from heat and open flame. See Material Safety Data Sheet for more information.
