TIMKEN'S CONTROLLED SUBTANCE LIST

SCOPE

Timken's Controlled Substance List (CSL) applies to all new products supplied to The Timken Company ("Timken"), including substances, mixtures, compounds, and articles incorporated into Timken's finished goods. This requirement covers all product categories (e.g., raw materials, components, and assemblies). Chemicals used at Timken facilities (e.g., maintenance, cleaning, and process chemicals) whether or not they are incorporated into finished goods are also covered under this requirement.

The CSL identifies substances in all products and categories as described above that are prohibited (banned), restricted (subject to limits or conditions), or require supplier disclosure. Suppliers must ensure delivered products conform to these designations and provide complete, timely disclosures where applicable.

The CSL supplements, but does not supersede, the responsibilities of the supplier to comply with the laws and regulations covering these substances and products.

MANAGEMENT OF CHANGE & DEVIATIONS

Suppliers must promptly notify Timken if any change – including, but not limited to, changes in applicable laws or regulations – affects their ability to comply with Timken's CSL. No deviation from the CSL is permitted without Timken's prior written approval by the Company's Corporate Environmental, Health and Safety (EHS) Department.

All products will be purchased from "Approved" Suppliers. The Purchasing Department will maintain a current list of "Approved" Suppliers.

HAZARD COMMUNICATION & SAFETY DATA SHEETS

Suppliers shall promptly provide information on the hazardous, toxic, or other hazardous content or nature of their products and must submit a current Safety Data Sheets (SDSs) for all chemical and mixture products as required by applicable regulations to the plant receiving location. For each new chemical or mixture product, the SDS must be submitted for review to the responsible party at the plant location that requested the chemical prior to the initial shipment, and a copy of the SDS must be included with the initial shipment along with accurate product hazard labeling to the plant receiving area.

TIMKEN

PROHIBITED, RESTRICTED, & DECLARABLE SUBSTANCES

The Timken Company will not purchase any new products, such as chemicals, compounds, or articles, that contain any substances prohibited or restricted listed below, unless they meet the conditions set forth in the ***Appendix***. An exception is allowed for chemicals purchased for laboratory use in laboratory-scale quantities. Laboratories must review the CSL and assess associated hazards and regulatory implications before procuring any products. No other exceptions will be permitted unless authorized in writing by the Company's Corporate Environmental, Health and Safety (EHS) Department.

Prohibited Substances are defined as chemical substance(s) in a product (e.g., mixtures, materials, compounds, articles, etc.) that are banned from purchase, possession, or any other use at Timken due to health, safety, legal, regulatory, or sustainability reasons. Examples include substances banned by jurisdictional law or by corporate mandate.

Restricted Substances are defined as chemical substance(s) in a product (e.g., mixtures, materials, compounds, articles, etc.) that are not banned outright but are subject to controls, limits, or special use requirements for purchase, possession, or use at Timken.

Declarable Substances are defined as chemical substance(s) in a product (e.g., mixtures, materials, compounds, articles, etc.) that are not prohibited or restricted but must be reported (declared) to Timken prior to purchase when present at or above 0.1% unless otherwise noted. Disclosure allows Timken to assess regulatory, customer, and sustainability implications and to ensure appropriate downstream controls are applied. Products supplied to Timken that could reasonably fall within the scope of any regulation marked with an asterisk (*) must comply with that regulation.

Prohibited, Restricted, and Declarable Substances are summarized below while the ***Appendix*** provides details and a non-exhaustive list of corresponding CAS numbers for known substances to support accurate identification and procurement controls. This CSL and its ***Appendix*** are maintained as controlled documents and will be updated as regulatory requirements and corporate priorities change. Since chemical regulations and scientific understanding evolve frequently, the CAS numbers listed may not be exhaustive; absence from this list does not imply a substance is permitted.

CAS numbers may appear more than once; in cases of duplication, the most stringent control applies.

CAS numbers of regulation(s) marked with an asterisk (*) are not included in the ***Appendix*** because they primarily govern end-product compliance rather than upstream material-level control; suppliers should still be aware of these regulations and ensure finished products meet their requirements.

While the CSL does not encompass every country's chemical regulations, suppliers must ensure their products comply with the chemical laws and regulations applicable both in the country where the product is manufactured and in the country where it will be sold or used.
